

## The Great American Eclipse: August 21, 2017

The last total solar eclipse visible in the contiguous United States was on February 26, 1979.  
The next total solar eclipse that will also be visible here will happen on April 8, 2024.

We invite you to share your thoughts, observations, hopes, trivia, news headlines, photos, predictions, etc. for a time capsule that will be kept here at Maxwell Memorial Library and opened during the next eclipse in 2024.

Have fun with this! We hope you'll be able to join us seven years from now to share memories of today.

Tell us about yourself—name, age, where you live; are you in school, do you work, are you retired; anything else of interest!

Do you remember the 1979 eclipse? If so, where were you then? Where do you hope you'll be in 2024?

What are your wishes for Camillus, our country, and our world in the future?

What's the last book you read, music or concert you enjoyed, movie or television show you watched?

Describe today—the weather, the people, the eclipse itself. If you have something you think would be fun and interesting to look at in 2024-- a news headline, a weather report, a list of today's popular books, a listing of local movies, a store receipt, a record of gasoline prices—include it and we'll keep it in the time capsule.

Thank you!

Enjoy the eclipse!
